

AI-POWERED CUSTOMER SUPPORT TICKETING SYSTEM

User Story

As a customer support executive, I want an AI-powered ticketing system that automatically creates, categorizes, prioritizes, and assigns customer support tickets so that customer issues are resolved faster and more efficiently.

The system should allow customers to submit support requests through multiple channels, while AI analyzes the issue, predicts its priority, recommends solutions, and routes it to the appropriate support agent. Managers should be able to monitor ticket status, agent performance, SLA compliance, and customer satisfaction through reports and dashboards.

1. INTRODUCTION

1.1 Project Overview

The AI-Powered Customer Support Ticketing System is a Salesforce-based application designed to improve customer service operations using Artificial Intelligence. The system automates ticket creation, categorization, assignment, prioritization, notifications, and reporting.

AI helps identify the issue category, urgency level, and recommends the best support agent based on workload and expertise. This reduces manual effort, improves response time, and enhances customer satisfaction.

1.2 Purpose

The purpose of this project is to:

Automate customer support ticket management.

Improve response and resolution time.

Reduce manual ticket assignment.

Increase customer satisfaction.

Provide AI-powered ticket prioritization.

Generate reports and dashboards for performance analysis.

Improve SLA compliance.

2. IDEATION PHASE

2.1 Problem Statement

PS-1 Customer

Trying to: Raise a support request.

Problem: Delayed response.

Because: Tickets are assigned manually.

Feeling: Frustrated.

PS-2 Support Agent

Trying to: Resolve customer issues quickly.

Problem: Large number of tickets.

Because: No intelligent ticket prioritization.

Feeling: Overloaded.

PS-3 Support Manager

Trying to: Monitor team performance.

Problem: Lack of real-time analytics.

Because: Manual reporting process.

Feeling: Unsatisfied.

4. PROJECT DESIGN

Problem-Solution Fit

The system replaces manual ticket handling with AI-powered automation. AI classifies customer issues, predicts ticket priority, assigns tickets to the right support agent, and automates notifications. This improves customer satisfaction and operational efficiency.

5. PROJECT PLANNING

Sprint 1

Activity 1: Creating Developer Account

Creating a developer org in salesforce.

Go to <https://developer.salesforce.com/signup>

On the sign up form, enter the following details :

First name & Last name

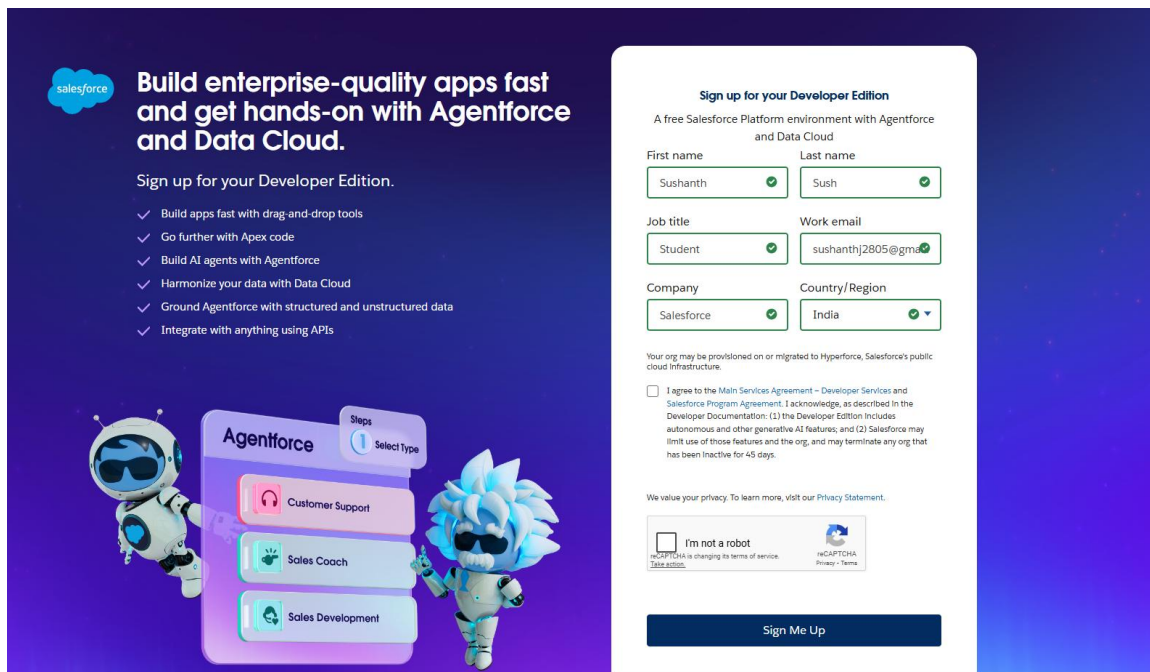

Email

Job Title: Developer

Company: College Name

Country: India

Click on sign me up after filling these

The image shows the Salesforce Agentforce sign-up page. On the left, there's a promotional banner with the Salesforce logo and the text "Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud." Below this, it says "Sign up for your Developer Edition." and lists five benefits: building apps fast with drag-and-drop tools, going further with Apex code, building AI agents with Agentforce, harmonizing data with Data Cloud, and integrating with APIs. There are also two cartoon robot characters and a "Steps" menu with "Select Type" highlighted. On the right, there's a "Sign up for your Developer Edition" form. It includes fields for First name (Sushanth), Last name (Sush), Job title (Student), Work email (sushanthj2805@gmail.com), Company (Salesforce), and Country/Region (India). Below the form, there's a checkbox for agreeing to the Main Services Agreement, a privacy statement link, a reCAPTCHA "I'm not a robot" widget, and a "Sign Me Up" button.

Build enterprise-quality apps fast and get hands-on with Agentforce and Data Cloud.

Sign up for your Developer Edition.

- ✓ Build apps fast with drag-and-drop tools
- ✓ Go further with Apex code
- ✓ Build AI agents with Agentforce
- ✓ Harmonize your data with Data Cloud
- ✓ Ground Agentforce with structured and unstructured data
- ✓ Integrate with anything using APIs

Sign up for your Developer Edition
A free Salesforce Platform environment with Agentforce and Data Cloud

First name: Sushanth ✓ Last name: Sush ✓

Job title: Student ✓ Work email: sushanthj2805@gmail.com ✓

Company: Salesforce ✓ Country/Region: India ✓

Your org may be provisioned on or migrated to Hyperforce, Salesforce's public cloud infrastructure.

☐ I agree to the Main Services Agreement – Developer Services and Salesforce Program Agreement. I acknowledge, as described in the Developer Documentation: (1) the Developer Edition includes autonomous and other generative AI features; and (2) Salesforce may limit use of those features and the org, and may terminate any org that has been inactive for 45 days.

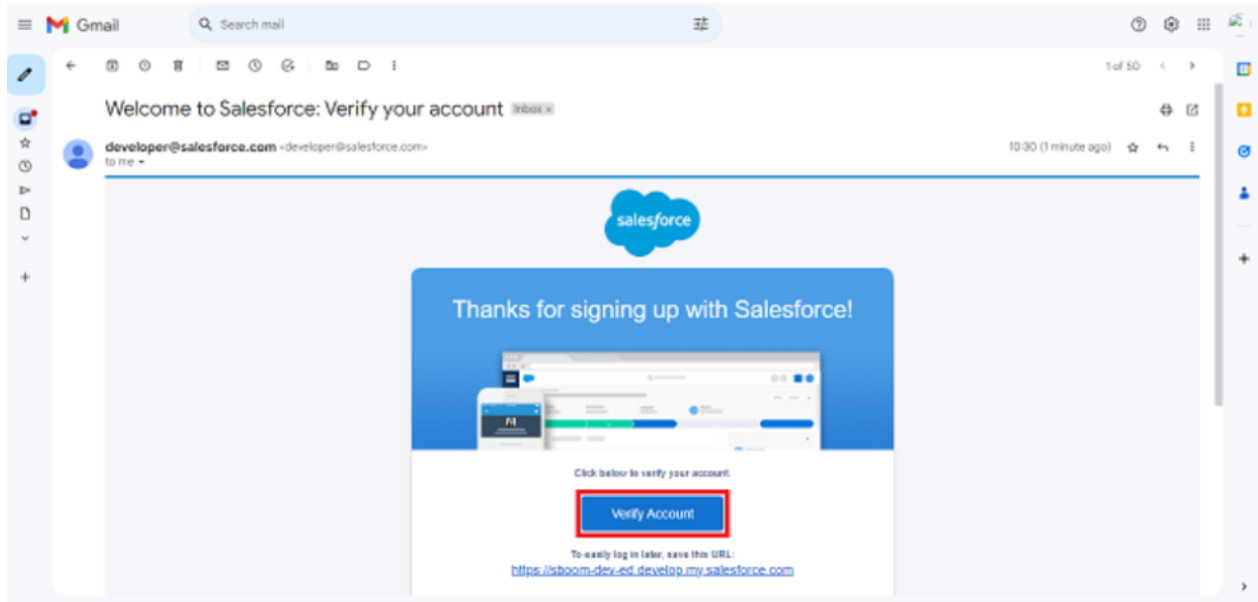

We value your privacy. To learn more, visit our [Privacy Statement](#).

☐ I'm not a robot
reCAPTCHA is changing its terms of service. [Take action.](#) reCAPTCHA Privacy - Terms

Sign Me Up

Activity 2: Account Activation

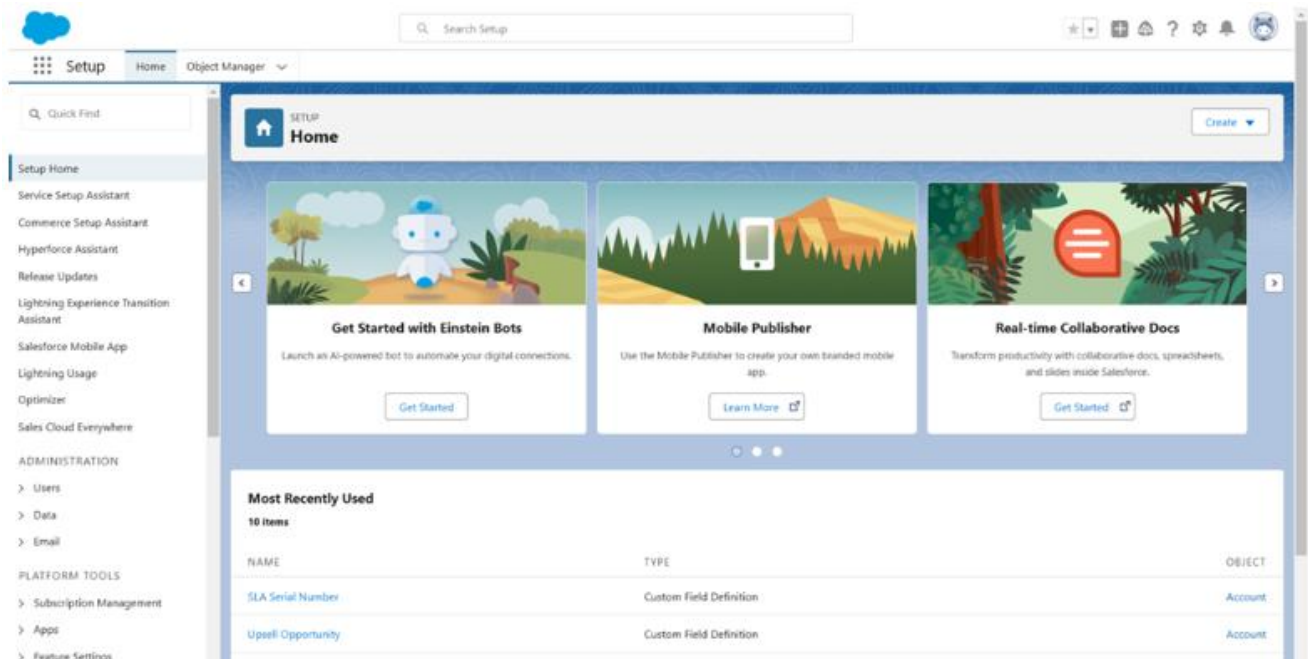

Go to the inbox of the email that you used while signing up. Click on the verify account to activate your account. The email may take 5-10mins.

Click on Verify Account

Give a password and answer a security question and click on change password.

Then you will redirect to your salesforce setup page.

Standard Objects Used:

Account

(Fields: Account Name, Phone, Industry, Type)

Contact

(Fields: First Name, Last Name, Email, Phone)

Case

(Fields: Case Number, Subject, Description, Status, Priority, Issue Type, SLA Due Date, AI Suggested Reply, Resolution Time)

Created Custom Objects:

Support_Category__c

(Fields: Category Name, Description, Default Priority, Active)

SLA_Policy__c

(Fields: Policy Name, Priority Level, Resolution Time (Hours), Escalation Required)

AI_Feedback__c

(Fields: AI Feedback Number (Auto Number), AI Suggestion Type, Feedback Status, Agent Comments)

Relationships:

Relationship	Type
Account → Contact	Lookup
Account → Case	Lookup
Contact → Case	Lookup
Support Category → Case	Lookup
SLA Policy → Case	Referenced via Flow
AI Feedback → Case	Lookup

Activity 1: Create AI Feedback Object

The purpose of creating an AI Feedback object is to have a clear picture of the present running listed Feedback.

To create an object:

From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

Enter the label name → AI Feedback

Plural label name → AI Feedbacks

Enter Record Name Label and Format

Record Name → AI Feedback Number

Data Type → Auto Number

Display Format → AF-{00000}

Custom Object Definition Edit [Save] [Save & New] [Cancel]

Custom Object Information

The singular and plural labels are used in tabs, page layouts, and reports.

Label: Example: Account

Plural Label: Example: Accounts

Starts with vowel sound: ☐

The Object Name is used when referencing the object via the API.

Object Name: Example: Account

Description:

Context-Sensitive Help Setting: ☒ Open the standard Salesforce.com Help & Training window ☐ Open a window using a Visualforce page

Content Name:

Enter Record Name Label and Format

The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via

Record Name: Example: Account Name

Data Type: Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.

Display Format: Example: A-{00000} What Is This?

Starting Number:

Click on Allow reports,

Allow Search

Allow search → **Save**

Optional Features

- ☒ Allow Reports
- ☐ Allow Activities
- ☐ Track Field History
- ☐ Allow in Chatter Groups
- ☐ Enable Licensing

Object Classification

When these settings are enabled, this object is classified as an Enterprise Application object. When these settings are disabled, this object is classified as a Light Application object. [Learn more.](#)

- ☒ Allow Sharing
- ☒ Allow Bulk API Access
- ☒ Allow Streaming API Access

Deployment Status

[What is this?](#)

- ☐ In Development
- ☒ Deployed

Search Status

When this setting is enabled, your users can find records of this object type when they search. [Learn more.](#)

- ☒ Allow Search

Object Creation Options (Available only when custom object is first created)

- ☐ Add Notes and Attachments related list to default page layout
- ☐ Launch New Custom Tab Wizard after saving this custom object

Buttons:

Activity 2: Create Support Category object

To create an object:

From the setup page → Click on Object Manager → Click on Create → Click on Custom Object.

Enter the label name → Support Category

Plural label name → Support Categories

Enter Record Name Label and Format

Record Name → Support Category

Data Type → Text

Click on Allow reports,

Allow search → Save

Activity 3: Create remaining objects

Follow the same steps as mentioned above and complete object creation for

SLA Policy

Sprint 3

Activity 1: Creating a Custom Tab (AI Feedback)

Go to setup page → type Tabs in Quick Find bar → click on tabs → New (under custom object tab)

The screenshot shows the Salesforce Setup interface. At the top, there is a navigation bar with 'Setup', 'Home', and 'Object Manager'. Below this, a search bar contains the text 'tabs'. In the left sidebar, under 'User Interface', the 'Tabs' option is highlighted. The main content area is titled 'Custom Tabs' and includes a sub-header 'SETUP Tabs'. Below this, there is a paragraph explaining that custom tabs can be created to extend Salesforce functionality. The main content area is divided into five sections: 'Custom Object Tabs', 'Web Tabs', 'Visualforce Tabs', 'Lightning Component Tabs', and 'Lightning Page Tabs'. Each section has a 'New' button and a 'What Is This?' link. The 'Custom Object Tabs' section also displays the message 'No Custom Object Tabs have been defined'.

Setup Home Object Manager

Q tabs

User Interface

Rename Tabs and Labels

Tabs

Didn't find what you're looking for?
Try using Global Search.

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to allow you to add Lightning Pages to Lightning Experience and the mobile app.

Description

Activity 2:

Now create tabs for Other objects as well with the same procedure.

Fields & Relationships

AI-Powered Customer Support Ticketing System

Field Label	API Name	Data Type	Purpose
AI Feedback Number	Name	Auto Number	Unique feedback record
Case	Case__c	Lookup (Case)	Related support case
Feedback Status	Feedback_Status__c	Picklist (Helpful, Not Helpful)	Agent rating of AI output
AI Suggestion Type	AI_Suggestion_Type__c	Picklist (Case Classification, Priority Prediction, Suggested Reply)	Type of AI suggestion
Agent Comments	Agent_Comments__c	Long Text Area	Agent remarks on AI quality
Created By	CreatedById	Lookup (User)	Agent who provided feedback
Created Date	CreatedDate	Date/Time	Feedback timestamp

SLA Due Date Required for High Priority Cases

Step-by-Step Implementation

Step 1: Go to Object Manager

Log in to your Salesforce Developer Org

Click Setup

Navigate to Object Manager

Select Case

Step 2: Open Validation Rules

Inside Case object settings, click Validation Rules

Click New

Step 3: Enter Rule Details

Rule Name: SLA_Due_Date_Required_For_High_Priority

Description: Ensures SLA Due Date is populated for High priority cases

Step 4: Enter the Validation Formula

Paste the following formula:

```
AND(  
  ISPICKVAL(Priority, "High"),  
  ISBLANK(SLA_Due_Date__c)  
)
```

```
AND(  
  ISPICKVAL(Priority, "High"),  
  ISBLANK(SLA_Due_Date__c)  
)
```

Step 5: Add Error Message

Error Message: SLA Due Date must be populated for High priority cases.

Error Location: Field → SLA Due Date

Step 6: Save and Activate

Click Save

Ensure the validation rule is Active

Step 7: Test the Validation Rule

Create a new Case

Set Priority = High

Leave SLA Due Date empty

Click Save

Expected Result: Salesforce shows the error message and prevents saving the record.

Step 8: Positive Test Case

Set Priority = High

Enter a value in SLA Due Date

Save the Case

Expected Result: Case is saved successfully.

Sprint 4

Email Alerts

Case Resolution Email

Prerequisite (Do This Once)

Step 0: Create an Email Template

Email Alerts require email templates.

Go to Setup

Search Email Templates

Click New Email Template

Choose Classic Email Template (simple and reliable)

Select Case as the related object

Create three templates as below.

Email Template : Case Resolution Email

Template Name: Case_Resolution_Email

Subject: Your Case Has Been Resolved – {!Case.CaseNumber}

Email Body:

```
Hello {!Case.Contact},

Your case has been successfully resolved.

Case Number: {!Case.CaseNumber}
Status: {!Case.Status}

If you have further questions, feel free to contact us.

Thank you,
Support Team
```

Click Save

EMAIL ALERT CONFIGURATION

Now create Email Alerts using these templates.

Email Alert : Case Resolution Email

Step 1: Create Email Alert

Setup → Email Alerts

Click New Email Alert

Step 2: Configure

Description: Case Resolution Email

Object: Case

Email Template: Case_Resolution_Email

Recipients:

Contact Email

Click Save

Step 3: Trigger the Email

Use Record-Triggered Flow

Flow Condition:

When Case is updated

Condition:

Status equals Closed

Action:

Send Email Alert → Case Resolution Email

Case Resolution Email – Record-Triggered Flow

Step-by-Step Implementation

Prerequisite (Confirm First)

Make sure you already have:

Email Alert created: Case Resolution Email

Email Template linked to Case

Recipient set (usually Contact Email)

STEP 1: Create a New Flow

Go to Setup

Search for Flows

Click New Flow

Select Record-Triggered Flow

Click Create

STEP 2: Configure Start Element

Set the following:

Object: Case

Trigger: When a record is updated

Condition Requirements: All Conditions Are Met (AND)

Condition

Field: Status

Operator: Equals

Value: Closed

Optimize for: Actions and Related Records

Click Done

STEP 3: Add Entry Condition (Best Practice)

To ensure email is sent only once when status changes to Closed:

Click Add Condition

Add this condition:

Field: Status

Operator: Equals

Value: Closed

Click Add Condition

Enable Only when the record is updated to meet the condition requirements

(This prevents duplicate emails.)

STEP 4: Add Action – Send Email Alert

Click Add Element (+)

Select Action

In Action Type, choose Send Email Alert

Click Next

Configure Action

Label: Send Case Resolution Email

Email Alert: Case Resolution Email

Click Done

STEP 5: Save and Activate the Flow

Click Save

Flow Name: Case Resolution Email Flow

Click Activate

STEP 6: Test the Flow

Open an existing Case

Ensure Status is not Closed

Update Status → Closed

Click Save

Expected Result

Case Resolution Email is sent to the customer (Contact Email)

Testing Steps (Important)

Create a new Case

Let SLA Due Date pass

Close the Case

Verify Case Resolution email sent to customer

Sprint 5

Agentforce AI Implementation

Prerequisites

Ensure Einstein and Agentforce are enabled in your Salesforce org:

Navigate to Setup > Einstein Setup > Toggle Turn on Einstein.

The image displays two screenshots of the Salesforce Setup interface, specifically focusing on the Einstein and Agentforce sections.

Top Screenshot: Einstein Setup

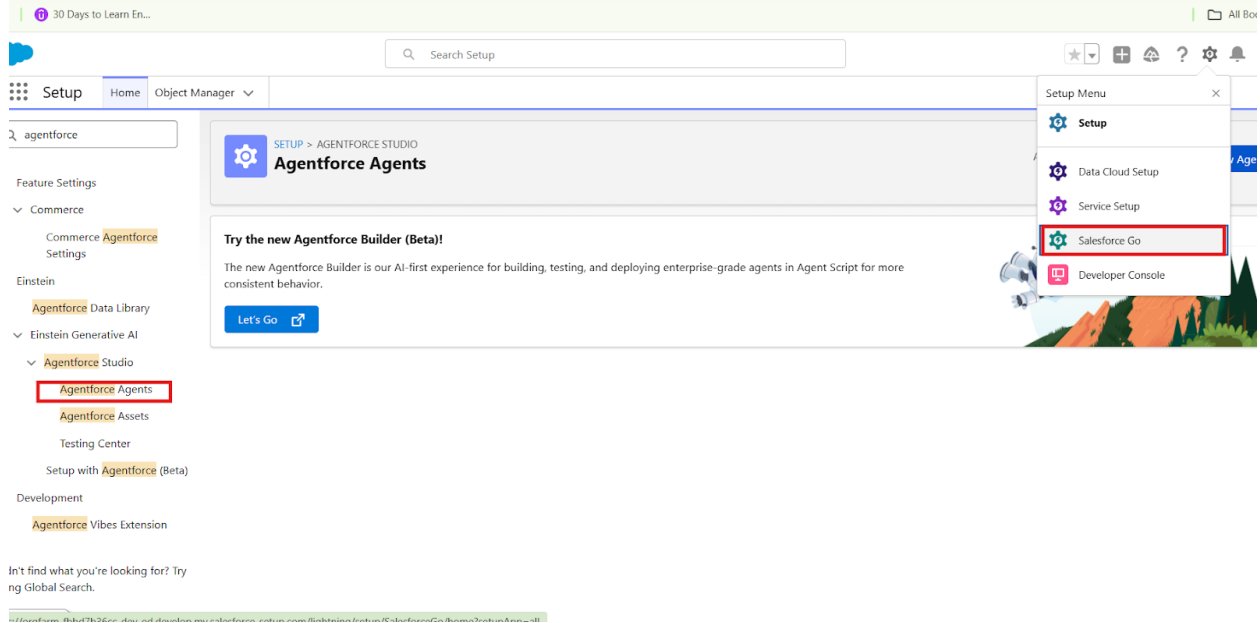

- Search:** Search Setup
- Navigation:** Setup, Home, Object Manager
- Search Results:** Q. einstein set
- Left Sidebar:** Einstein, Einstein Generative AI, Einstein Setup
- Main Content:**
 - Turn on Einstein:** Enhance your Salesforce data with generative AI to create relevant, customized experiences for your users. [Learn more in help.](#) ☒ On
 - Prompt Builder Settings:**
 - Global Languages:** Use global languages with prompt templates. See [Supported Languages](#). Some Einstein Trust Layer features may not be available for certain languages. See [Einstein Trust Layer Language Support](#). ☐ Off
 - Deploy Prompt Templates:** Deploy prompt templates between sandbox and production orgs using change sets. ☐ Off

Bottom Screenshot: Agentforce Agents

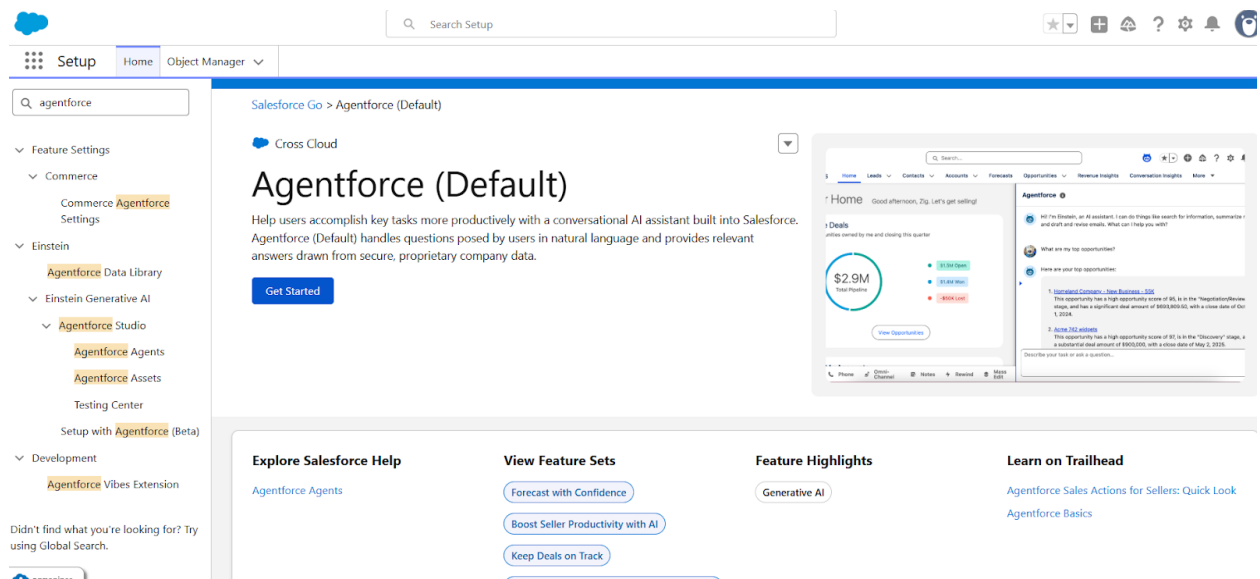

- Search:** Search Setup
- Navigation:** Setup, Home, Object Manager
- Search Results:** Q. agent
- Left Sidebar:** Feature Settings, Commerce, Agentforce Settings, Einstein, Agentforce Data Library, Einstein Generative AI, Agentforce Studio, Agent Analytics, Agentforce Agents, Agentforce Assets, Testing Center, Development, Agentforce Vibes Extension
- Main Content:**
 - Get to Know Agentforce Agents:**
 - Hit the Trail with Agents:** Follow along with an admin as they explore what makes agents tick and launch an agent for their business. [Go to Trailhead](#)
 - Customize Agents with Actions:** Actions are how an agent gets things done. Learn how to create agent actions tailored to your business needs in the [Salesforce Admins Blog](#). [Go to Blog](#)
 - Succeed with Documentation:** Salesforce Help has all the info you need to customize, test, and activate an agent for your use cases. [Go to Help](#)
 - Enable the Agentforce (Default) Agent:** Help your employees accomplish key business tasks in Salesforce and Slack with the default AI assistant for Salesforce CRM. ☒ On
 - (Optional) Select the Model for Agentforce:** The model provider selection applies to all agents. If you previously created any prompts or custom actions or topics for Agentforce, test them after switching your model. [Learn More](#) [Salesforce Default](#)
 - Give Users Access to the Agentforce (Default) Agent:** [Assign Permission Set Groups](#)
 - Warning:** Agentforce (Default) will be retired soon. To avoid service interruptions and keep your existing configuration, migrate to an Agentforce Employee agent.
 - Migrate to an Agentforce Employee Agent:** Create an Agentforce Employee agent from your Agentforce (Default) agent to get improved access control, expanded channel support, and more without losing your existing

You need administrative permissions to create flows, agent actions, and configure Agentforce.

Familiarity with Salesforce Flow Builder and basic Movie object fields (e.g., Name, Genre, Duration, Language).

Click On Get Started

Click Turn On

1. Enable Agentforce

Step 1: Enable Einstein Setup

Go to Setup

Search for Einstein Set up

Turn On(If it is already turned on , just refresh the page)

AI Suggested Replies Using Prompt Templates (via Agentforce Action)

Purpose

To generate ready-made reply suggestions for support agents based on Case content, using Prompt Templates and Agentforce Actions, without using Flows or Einstein Reply Recommendations

How This Works (Simple Agent Flow)

Agent opens a Case

Agentforce Agent is available on the Case

Agent triggers an Agentforce Action

Prompt Template reads:

Case Description

Issue Type

Priority

AI generates a suggested reply

Reply is shown to the agent

Agent reviews, edits, and sends the response

Step-by-Step Implementation

Step 1: Enable Prompt Builder

Go to Setup

Search for Prompt Builder

Enable Prompt Builder / Prompt Templates

Save

Step 2: Create Prompt Template for Suggested Reply

Setup → Prompt Builder

Let's chat!

Hi! I'm Agentforce, an AI assistant. I can do things like search your Salesforce data or the internet, edit your Salesforce records, and draft or revise emails and fields....

Show More

Describe your task or ask a question...

This is how the agent looks.

Click Activate

Click Ignore and Activate.

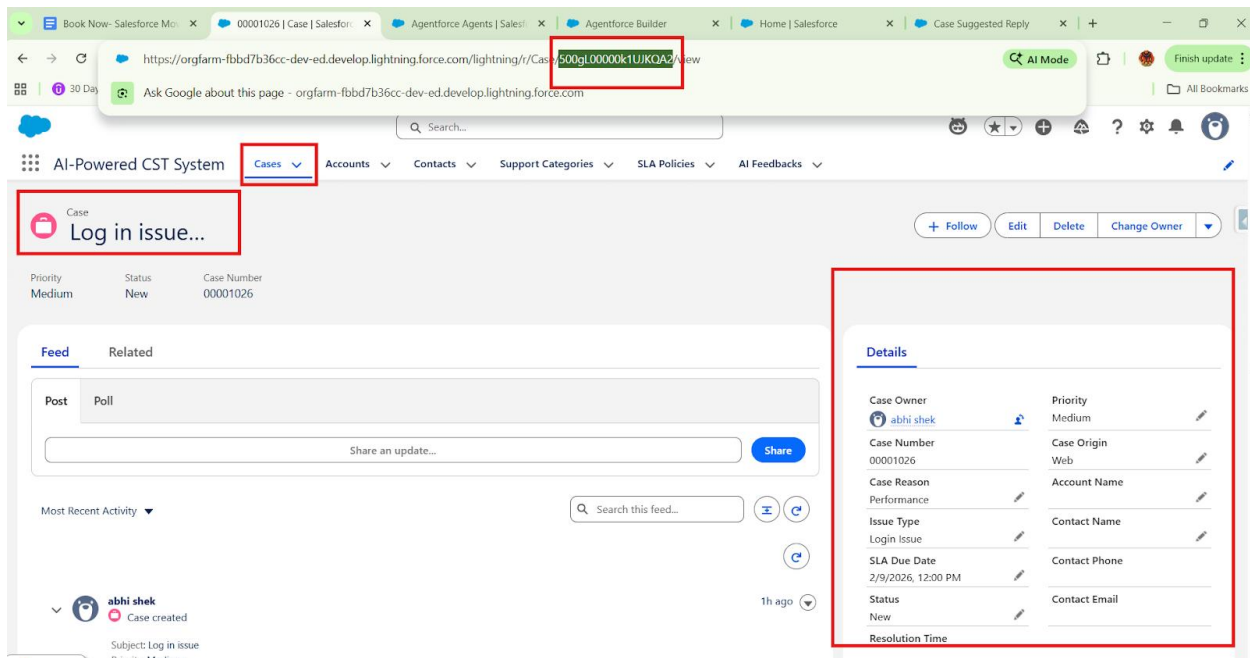

Test the Agent with prompts:-

Can you give a case solution response?

Then It will ask Case ID

Create a case record with some data like subject etc

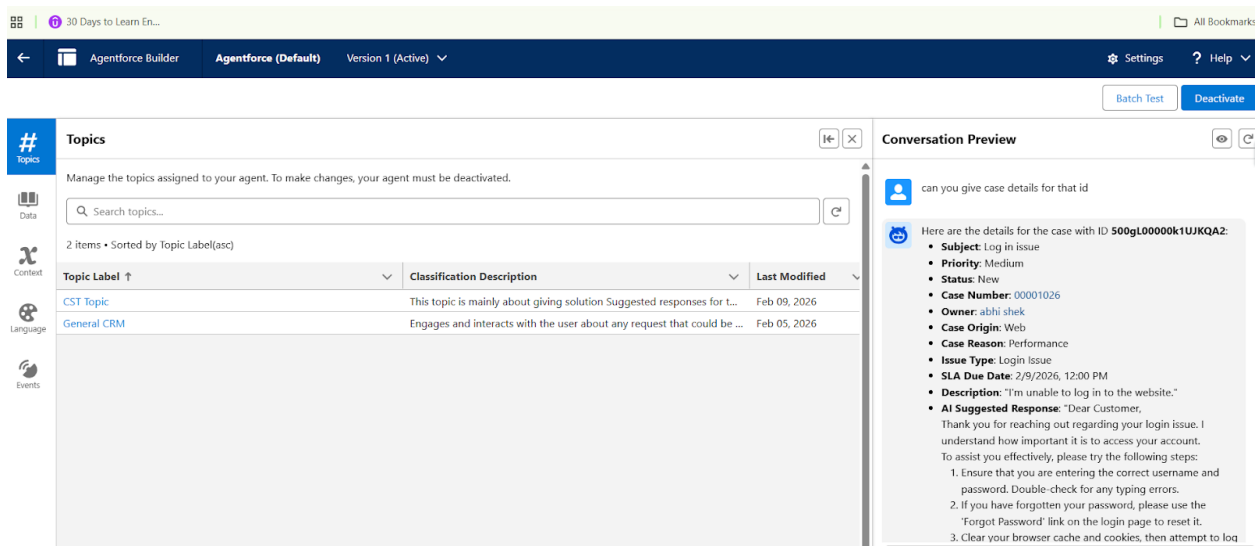

Then open the record, at top in the you will get ID

Paste it in agent, then you will get response

If you want details you can use this prompt “can you give case details for that id”

You will get details like this

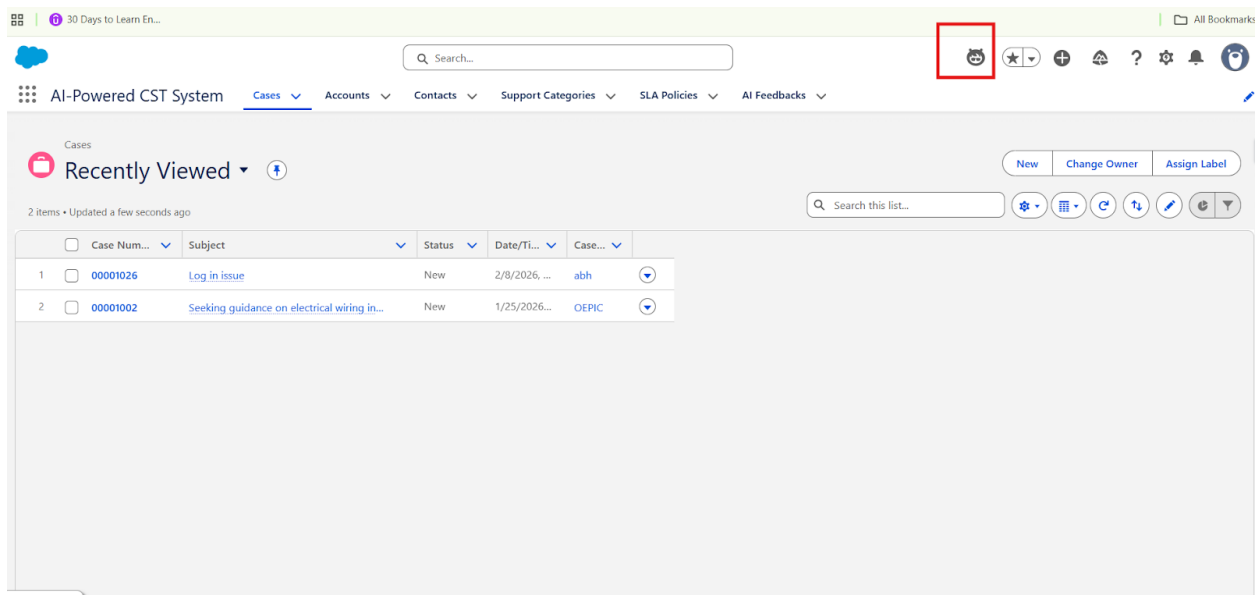

Our agent is Created and Tested Successfully

Now we will check this agent in our AI Powered CST System App.

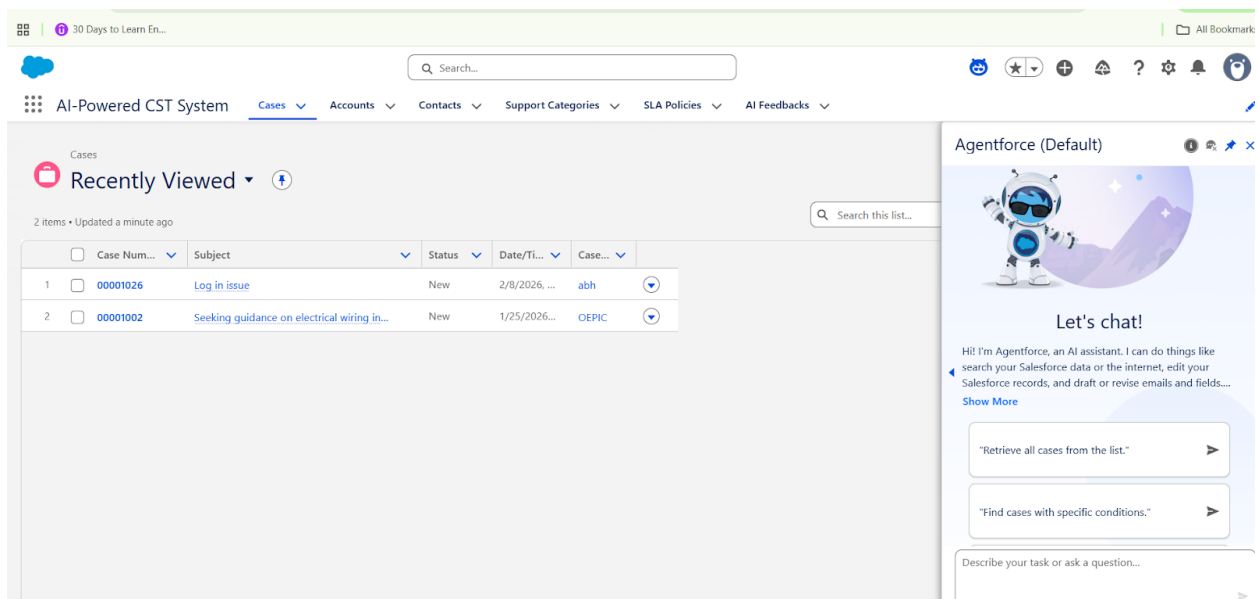

Click on Back and Click Leave(Make sure you activate that Agent)

Click on the left side.

Then Search for AI Powered CST System, click on it

Click on agent Icon

The agent will appear like this.

Use the previous prompts and get responses

Sprint 6

Activity 1: Create a Lightning App

To create a lightning app page:

Go to setup page → search “app manager” in quick find → select “app manager” → click on New lightning App

Search Setup

Setup Home Object Manager

Q app manager

Apps

App Manager

External Client Apps

External Client App Manager

Lightning Out 2.0 Apps

Lightning Out 2.0 App Manager

Add the following fields:

Case Number

Subject

Priority

Status

Case Owner

Step 5: Group by Priority

Drag Priority into the Group Rows area

To track agent workload and efficiency.

Step-by-Step Process

Step 1: Create New Report

Go to Reports

Click New Report

Select Cases

Click Continue

Step 2: Apply Filters

Show Me: All Cases

Created Date: All Time

Status: Closed

Step 3: Add Columns

Case Number

Owner

Priority

Created Date

Closed Date

Resolution Time (Hours)

Step 4: Group by Agent

Drag Owner into Group Rows

Step 5: Add Summary Fields

Click Resolution Time

Step 5: Add Summary Fields

1. Click Resolution Time

The screenshot shows the 'Agent Performance Report' in Salesforce. The 'Resolution Time' column is highlighted, and a context menu is open with the 'Summarize' option selected. The menu also shows 'Sum' and 'Average' as options. The table below shows the data for the 'Resolution Time' column.

Case Owner	Case Number	Priority	Contact Created Date	Closed Date	Resolution Time
	00010001	Medium	1/25/2020	1/26/2021	9,952
	00010005	Medium	1/25/2020	1/26/2021	9,952
	00010006	Low	1/25/2020	1/26/2021	9,952
	00010007	Medium	1/25/2020	1/26/2021	9,952
	00010009	Low	1/25/2020	1/26/2021	9,952
	00010009	Medium	1/25/2020	1/26/2021	9,952
	00010013	Low	1/25/2020	1/26/2021	9,952
	00010011	Medium	1/25/2020	1/26/2021	9,952
	00010012	Medium	1/25/2020	1/26/2021	9,952
	00010013	Medium	1/25/2020	1/26/2021	9,952
	00010014	High	1/25/2020	1/26/2021	9,952
	00010015	Medium	1/25/2020	1/26/2021	9,952
	00010017	Medium	1/25/2020	1/26/2021	9,952
	00010018	Medium	1/25/2020	1/26/2021	9,952
	00010019	High	1/25/2020	1/26/2021	9,952

Select Summarize

Choose Average

Step 6: Save and Run

Report Name: Agent Performance Report

Folder:- Public reports

Save and Run

Sprint 7

User

Creating Users for the Project

Users to Create

Admin User → System Administrator profile

Agent User → Support Agent profile

Manager User → Support Manager profile

STEP 1: Go to Users Setup

Log in to your Salesforce Developer Org

Click Setup

In the Quick Find box, search for Users

Click Users

Click New User

STEP 2: Create Admin User

Click New User

Enter the following details:

User Information

First Name: Admin

Last Name: User

Alias: admin

Email: admin.cst@demo.com

Username: admin.cst@demo.com

Role: (leave blank or select any role if created)

User License

Salesforce

Profile

System Administrator

Locale settings can be left as default

Make sure Active is checked

Click Save

STEP 3: Create Support Agent User

From Users page, click New User

Enter the following details:

User Information

First Name: Support

Last Name: Agent

Alias: agent

Email: agent.cst@demo.com

Username: agent.cst@demo.com

User License

Salesforce

Profile

Support Agent

Ensure Active is checked

Click Save

STEP 4: Create Support Manager User

Click New User

Enter the following details:

User Information

First Name: Support

Last Name: Manager

Alias: manager

Email: manager.cst@demo.com

Username: manager.cst@demo.com

User License

Salesforce

Profile

Support Manager

Ensure Active is checked

Click Save

STEP 5: Verify Users

Go to Setup → Users

Confirm all three users are listed

Check profile assignment for each user

STEP 6: (Optional) Assign Permission Sets

If you created permission sets:

Open a user record

Click Permission Set Assignments

Click Edit Assignments

Assign required permission sets (AI Feature Access, Report Access)

Final Check (Important)

Each user has one profile

Users are active

Username are unique

Profiles match the role

6. PROJECT DEVELOPMENT

Testing

7. TESTING

Testing includes:

Ticket Creation

AI Prediction

Auto Assignment

Email Alerts

Validation Rules

Reports

Dashboards

Performance Testing

8. ADVANTAGES

Faster ticket resolution

Reduced manual work

Intelligent ticket routing

Better customer satisfaction

AI-powered recommendations

Real-time reporting

Improved productivity

Better SLA compliance

9. DISADVANTAGES

Requires Salesforce License

Internet Dependency

Initial AI Training Required

Higher Implementation Cost

10. CONCLUSION

The AI-Powered Customer Support Ticketing System successfully automates customer service operations using Salesforce and Artificial Intelligence. The system improves response time, reduces manual work, enhances customer satisfaction, and provides real-time business insights through reports and dashboards. AI-driven automation enables organizations to deliver efficient, scalable, and intelligent customer support services.

11. FUTURE SCOPE
